2028_REC_OOPS using Java_Week 10_Q3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a TreeMap<Character, Integer> to count how many times each character appears in the message.Ignores spaces and considers only alphabets (case-sensitive).Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

Input Format

The first line of input contains an integer n, the number of lines in the message.

The next n lines each contain a string (the encrypted message line).

Output Format

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
Hello World
Java

Output: Character Frequency:

H: 1
J: 1
W: 1
a: 2
d: 1
e: 1
l: 3
o: 2
r: 1
v: 1

Answer

```
// You are using Java
import java.util.*;

class main{
    public static void main(String[] ar) {
        Scanner s = new Scanner(System.in);
        int n = s.nextInt();
        s.nextLine();
        TreeMap<Character, Integer> f = new TreeMap<>();
        for (int i=0;i<n;i++) {
            String l = s.nextLine();
            for (char c : l.toCharArray())
                f.put(c, f.getOrDefault(c, 0) + 1);
        }
        for (Map.Entry<Character, Integer> e : f.entrySet())
            System.out.println(e.getKey() + ":" + e.getValue());
    }
}
```

```
        for (char c : l.toCharArray()) {
            if (Character.isLetter(c)) {
                f.put(c, f.getOrDefault(c, 0) + 1);
            }
        }
        System.out.println("Character Frequency:");
        for (Map.Entry<Character, Integer> t : f.entrySet()) {
            System.out.print(t.getKey() + ": " + t.getValue() + "\n");
        }
        s.close();
    }
}
```

Status : Correct

Marks : 10/10
