## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 1\_Q6

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Joey is learning about bitwise operations and is working on a project that involves extracting specific bits from integers. He needs to write a program that takes an integer and the number of bits N as input and outputs the value of the lowest N bits of the integer.

Help Joey in his project to understand and visualize how bitwise operations work in practical scenarios.

##### ***Input Format***

The first line of input consists of an integer X, representing the given integer.

The second line consists of an integer N, representing the number of bits to extract.

### ***Output Format***

The output displays "Result: " followed by an integer representing the value of the lowest N bits of the given integer.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 85

2

Output: Result: 1

### ***Answer***

```
// You are using Java
import java.util.Scanner;

class suga{
    int a,b;
    suga(int a,int b){
        this.a=a;
        this.b=b;

    }
    void disp(){
        int n=(1<<b)-1;
        int r=a&n;
        System.out.println("Result: "+r);

    }

    public static void main(String[] args){
        Scanner s=new Scanner(System.in);
        int a=s.nextInt();
        int b=s.nextInt();

        suga ob=new suga(a,b);
        ob.disp();
        s.close();
    }
}
```

}

**Status : Correct**

**Marks : 10/10**
